

Journal Impact Factor of International Journal of Sediment Research Increase to 1.659

The 2018 Journal Citation Reports (JCR) have just been released by Clarivate Analytics in June. International Journal of Sediment Research 2017 Journal Impact Factor is 1.659.

In the past three years, the Journal Impact Factor of IJSR has been increasing year by year: 1.388 in 2015 and 1.494 in 2016. We would like to express our sincere thanks to our associate editors, reviewers, authors and readers for their invaluable contribution and tremendous support.

International Journal of Sediment Research is an international, peer reviewed journal focusing on the publication of original theoretical, numerical modeling, field observational, and laboratory studies and reviews dealing with processes, products and techniques in engineering problems related to sedimentation and erosion. Of particular interest are geography, geomorphology, soil erosion, watershed management, sediment transport, sedimentology, fluvial process, river geomorphology, reservoir sedimentation, coastal sedimentation and estuarine process, ecological sedimentation, environmental sedimentation, river management, and social and economic effects of sedimentation. Research scientists are welcome to submit their excellent papers to International Journal of Sediment Research.

If you have any questions when submitting your paper, please email to sedimentpaper@foxmail.com.
